FOR IMMEDIATE RELEASE

LaZee Tek announces “LaZee Mouse Pro” a Hands-Free Computer Mouse !

Ashley, IN -, LaZee Tek LLC announced today the release of its premier product offering, the “LaZee Mouse Pro. LaZee Tek said in it’s release, “ A new computer cursor control technology was recently released. This product offering is in response to a growing demand for hands-free computer access devices. The combination of sensor price reductions and emerging miniaturization of electronics allowed us to produce the first full-function, self-contained mouse emulator device!”

LaZee Tek is an affiliate of the Tri-State University Technology Center’s enterprise program. The, Executive Director of the Center states, “LaZee Tek is a wonderful example of a local entrepreneurial business with great business potential. We are very happy to have LaZee Tek as a client of the enterprise program and TSU Technology Center’s Business Incubator.”

The “LaZee Mouse Pro”, provides full cursor control in addition to left and right click with drag capability. All these features are controlled directly by the user, real-time, without the need for special software, dwelling, cameras, reflective materials or other hardware. The “LaZee Mouse Pro is self-contained, and worn by the user. The “LaZee Mouse Pro” is typically placed on top of the user’s head in conjunction with a headset, but is not limited to that location. The “LaZee Mouse Pro” unit weighs less than two ounces (excluding cable(s)) and is credit card size by ~½” thick. The “LaZee Mouse Pro” connects to the host computer via a standard USB connector. Alternate locations include wrist mounting or where-ever the user chooses to locate the device.

Cursor movement is achieved by the user tilting the “LaZee Mouse Pro” in the desired direction of movement. The unit provides proportional cursor speed depending upon the degree of tilt provided by the user. Speeds can be controlled via the standard mouse settings menus. Left click, right click and drag commands are performed via the “LaZee Mouse Pro” microphone input. Audio is detected by the “LaZee Mouse Pro” which then sends the appropriate button commands to the computer.

Audio is detected & processed much like Morse Code!

- One quick short sound will produce a left click
- Two quick short sounds will produce a double left click
- One long sound will produce a right click
- One long sound-extended will produce a right click plus drag function

“LaZee Mouse Pro” is shipped with a standard microphone headset, but is not a requirement for usage. Numerous microphones on the market with a standard 3.5 mm plug can be utilized with the “LaZee Mouse Pro”. Desktop, lapel, collar, or boom-mounted are just a few of many possibilities available.

The LaZee Mouse Pro can be utilized on any computer with an available USB port, running Microsoft Windows™ 2000, ME, or XP operating systems; MAC’s using OSX 10.2 and above; or most AAC devices utilizing a standard USB interface. No software or drivers are required to utilize the LaZee Mouse Pro. For more information about the “LaZee Mouse Pro” contact:
