

## LaZee Tek

---

Hands-Free Computer Controls

April 13, 2006

For Immediate Release

Ashley, IN - LaZee Tek unveiled two new additions to its LaZee Mouse family last week while exhibiting at the 2006 CEC Convention & Expo held at the Salt Palace in Salt Lake City, Utah. In addition to the popular **LaZee Mouse Pro** which made its debut at ATIA in January 2005, the **LaZee Mouse Switch** and **LaZee Mouse Cursor** have now officially joined the LaZee Mouse Family.

LaZee Tek has taken the generic design of the original LaZee Mouse, and built upon its flexibility to provide additional choices for the user in how the computer can be accessed. Where the original **Pro** model provided a unique clicking access via microphone, the **Switch** model provides clicking utilizing one or two external switches. The **Cursor** model provides a more cost effective solution for users who need the cursor control, but without clicking functions.

All three models of the LaZee Mouse family share the same cursor control. Its features are controlled directly by the user, real-time, without the need for special software, dwelling, cameras, reflective materials or other hardware. LaZee Mouse models are self-contained, and can be worn by the user anywhere they desire. The mice can be operated from the user's head, foot, finger, or anywhere good control is possible.

Installation is quick and easy without any complicated setup or adjustments. Most models have no controls to adjust. All units come with a full two year warranty. Free Demonstrator units can be requested for evaluations, with monthly rentals also being offered. All three models are in stock and available for immediate delivery.

The entire LaZee Mouse Family can be utilized on any computer or AAC device with an available USB port. This includes PCs, MACs, notebooks, desktops, handhelds and AAC devices from many vendors. LaZee Tek has submitted its products directly to the AAC vendors, for verification in their own test labs. To date, AMDi, Break Boundaries, Dynavox, and Zygo have reported full compatibility with all of their USB models, others are in process.
